

WINDSHIELD PROTECTANT

STEP 1

Begin with a **clean** surface.

NOTE: Never use a dirty microfiber towel, applicator sponge, polishing pad, or trigger sprayer that has been used to apply any other NanoCure protectant.

STEP 2

Apply a fine mist spray of NanoCure® Windshield Protectant liberally on to a paper towel, disposable foam applicator pad or microfiber towel.

STEP 3

Wipe the protectant onto the surface of the windshield in a crosshatch pattern to ensure complete coverage. Wait until the product dries – look for a light haze. (Approximately 1 minute)

STEP 4

Wipe the windshield with a **clean, damp** microfiber towel. Then immediately wipe the windshield with a **clean, dry** microfiber towel to remove all remaining haze.

NOTE: Do not apply too much water to the microfiber towel. A spray-mist is all that is required.

STEP 5

The windshield should appear clean and without any hazy residue. Repeat Step 4 above to remove any hazy or foggy spots.

Important: Never use a dirty microfiber towel, applicator sponge, polishing pad, or trigger sprayer that has been used to apply any other chemical.
